Characteristic

- Real-time remote monitoring: Monitor UPS operating parameters through the standard SNMP protocol (v1, v2c, v3) and web interface (HTTP/HTTPS).
- Proactive alarm notification: When the UPS encounters an abnormal situation, alarm information can be sent to the administrator immediately through various means to achieve a rapid response.
- Security management and control: Supports user privilege management (multi-level access control), and remote operations can be securely performed through the web interface or command-line interface.
- History records and reports: Record event logs and operating data for troubleshooting, performance analysis, and report generation.
- Flexible network integration: Provides standard 10/100 Mbps Ethernet interfaces (RJ-45) for seamless integration into existing IP networks.
- Enhanced availability and reliability: By providing early warnings and remote management capabilities, the risk of unexpected downtime caused by power issues is significantly reduced.
